Uncertainty and Risk in Urban Infrastructure Systems

CEVE/STAT 313 – Spring 2018
MWF 10:00 AM – 10:50 AM, Keck Hall, Room 105

by
Prof. Leonardo Dueñas-Osorio
Associate Professor, Department of Civil and Environmental Engineering, Rice University
6100 Main Street, MS-318, Houston, TX 77005
Ryon Laboratory, Room 212

Course objectives:

To introduce principles and methods to quantify the effects of uncertainty in the performance prediction of engineered infrastructure systems, and assist engineers and stakeholders with design, operation, and maintenance decision making. New concepts are presented via examples and exercise problems from different branches of engineering. Students will learn to apply quantitative risk analysis and modeling tools as well as a variety of deterministic and probabilistic decision analysis methods. The course emphasizes that the systematic treatment of uncertainty and risk quantification are essential for adequate engineering planning, design, operation, and decision support in the context of urban systems. It becomes clear that uncertainties are unavoidable but manageable as empowered by rational decision analysis methods.

Scope:

The course starts with a study of the roles of probability and uncertainty in engineering and their impact on societal decision making. Then, there is a focus on decision theory and analysis, as well as on the Bayesian approach to systematically combine real data with expert judgment. Risk analysis tools, utility theory, game theory, optimization, and infrastructure safety follow next, with an emphasis on extreme statistics that drive decision making. All mathematical concepts are developed in class and illustrated in the context of real engineering problems and phenomena.

Course calendar:

Week	Date	Lecture Topic	Suggested Reading
Introduction to uncertainty and risk management			
1	Jan. 8 – Jan. 12	Course overview, sample risk evaluation studies, rational decision making, and the role of mathematical modeling.	[1] Ch. 1, [2] Ch. 2, [3] Ch. 1, [4] Ch. 1, [5] Ch. 1

Decision theory I

2	Jan. 15 – Jan. 19	**Martin Luther King, Jr. Day (01/15)**, definitions, risk classifications, decision models, decision trees, decision criteria, and applications to risk assessment and management.	[2] Ch. 2, [3] Ch. 1, [5] Ch. 2, 4

Elements of probability

3	Jan. 22 – Jan. 26	Random variables, distributions, conditional probability, total probability, and Bayes' formula.	[1] Ch. 2.3, 3.1, [3] Ch. 2, [5] Appendix A

Descriptors of random variables and advanced probability distributions

4	Jan. 29 – Feb. 2	Moments of random variables, expectation, characteristic functions, and functions of random variables, random trials, random occurrences, and summary of distributions.	[1] Ch. 3.1-3.2, 4, [3] Ch. 3, [5] Appendix A

Decision theory II

5	Feb. 5 – Feb. 9	**Midterm recess (02/09)**, decisions based on existing information and prior analyses, decisions based on additional information.	[2] Ch. 2, [3] Ch. 1, [5] Ch. 4

Decision theory III

6	Feb. 12 – Feb. 16	**Exam I (02/13),** pre-posterior analyses, value of information, sensitivity of decisions to errors.	[2] Ch. 2, [5] Ch. 4, 9

Utility theory I

7	Feb. 19 – Feb. 23	Axioms of utility theory, utility functions, determination of utility values, decision maker preferences.	[2] Ch. 2, [3] Ch. 4, [5] Ch. 5

Utility theory II

8	Feb. 26 – Mar. 2	Utility function of monetary values and other variables, maximum expected utility, sensitivity of expected utility, assessment of probabilities.	[2] Ch. 2, [3] Ch. 4, [5] Ch. 5

Utility theory III

9	Mar. 5 – Mar. 9	Decisions with multiple objectives, weighted decision analysis, multi-attribute utility theory, outranking methods.	[2] Ch. 2, [3] Ch. 4-5, [5] Ch. 5

Spring break

10	Mar. 12 – Mar. 16	No class.

Bayesian approaches

11	Mar. 19 – Mar. 23	**Exam II (03/21)**, Bayesian discrete and continuous cases, Bayesian sampling theory.	[1] Ch. 9, [2] Ch. 2, [3] Ch. 8, [4] Ch. 2, 10

Bayesian applications in sampling and estimation

12	Mar. 26 – Mar. 30	Bayesian estimation, regression, correlation, and hybrid networks.	[1] Ch. 8, 9, [4] Ch. 2, 10, [5] Ch. 9, 12, 17

Limit and multivariate distributions

13	Apr. 2 – Apr. 6	Multivariate distributions, and distribution of extremes.	[1] Ch. 3.3 [2] Ch. 4, [3] Ch. 9, [5] Ch. 8, 11

Empirically determined distribution models for risk assessment

14	Apr. 10 – Apr. 14	Testing goodness-of-fitness of distribution models for risk quantification.	[1] Ch.7, [3], Ch. 10, [4] Ch. 4-5, [5] Ch. 2, 8

Sequential processes and game theory for risk management

15	Apr. 16 – Apr. 20	Uncertainty and analysis of errors, game theory, Markov processes, and optimization methods for risk management and decision making.	[3] Ch. 5, 10, [5] Ch. 6-10, 15-18, Appendix

Final examination period

16	Apr. 25 – May 2	Comprehensive examination and super-homework.

Course learning outcomes:

Students completing the course should be able to:

1. Make or support optimal decisions by probabilistically evaluating design or improvement alternatives under uncertainty.
2. Implement risk evaluation, analysis and control methods for effective risk assessment and management.
3. Model natural hazard phenomena with joint and extreme value probability distributions, calculate their moments, and explore functions of random variables.
4. Identify types of uncertainty and sources of uncertainty in infrastructure systems affecting practical decision making.

5. Perform analysis and quantification of errors in infrastructure performance prediction.
6. Identify, classify, model, assess and report in writing typical urban system risks.

Course grading:

Homework	20%
Examination I	25%
Examination II	25%
Final examination	30%

Academic honor code:

The Honor System embodies the concept of personal honor in a framework of law and practice. To quote the Constitution, Rice students are placed on their honor by the group "not to violate the trust placed in them in any way."

The result is a system of conducting examinations, writing papers, and performing other academic endeavors with regard for individual honor and without faculty proctoring. Thus, the responsibility for maintaining the validity of academic work is placed on all students.
Website: http://honor.rice.edu/

Disabilities:

Any student with a documented disability needing academic adjustments or accommodations is requested to speak with me during the first two weeks of class. All discussions will remain confidential. Students with disabilities will need to also contact Disability Support Services in the Ley Student Center.

Absences:

Students are expected to attend all lectures. Planned absences must be communicated to the instructor in advance of the event. Forced absences of unforeseen character must be discussed with the instructor as soon as practical after the event. Appropriate courses of action are determined on a case-by-case basis.

Office hours:

- Wednesdays from 2:00 PM – 3:00 PM: Prof. Dueñas-Osorio, Ryon Lab., Room 212
- Wednesdays from 3:00 PM – 4:00 PM: Ph.D. Candidate Bowen Fu, Ryon Lab., Room 222
